👤 ABOUT

Full-spectrum Engineer who embeds with the problem, ships into production and owns the integrations that make AI systems actually useful inside real enterprises. My work spans LLM orchestration, multi-tenant SaaS architecture, compliance-aware pipelines, and deep enterprise integrations — the kind of engineering where production uptime, audit trails, and regulated workflows are the bar.

💼 WORK EXPERIENCE

Phamax

Bengaluru, India

Ariya - AI platform for pharma that streamlines content generation, information research, analytics, and engagement.
May 2025 – Present

Principal Engineer (Ariya Platform)

Leading engineering for Ariya, an AI-powered platform transforming pharmaceutical content workflows, research, analytics, and engagement. Driving the design and delivery of scalable, compliant, and intelligent systems integrating generative AI with enterprise ecosystems.

Highlights

- Architecting core systems for an AI platform serving global pharmaceutical clients, enabling end-to-end content workflows across content creation, research, analytics, and engagement.
- Built the AI Content Wizard and content lifecycle management system covering authoring, multi-stage approval workflows, compliance validation, and omnichannel distribution across regulated markets.
- Designed and deployed LLM orchestration frameworks covering prompt engineering, context injection, RAG pipelines, embedding retrieval, and tool calling — enabling compliant, traceable content generation across multiple content types and markets.
- Integrated with enterprise ecosystems including Veeva CRM and Salesforce Marketing Cloud (SFMC) to support compliant omnichannel workflows across multiple client tenants.
- Led development of a centralized Data Catalog enabling metadata-driven discovery, observability, and self-serve data access across business and engineering teams.
- Implemented production-grade architecture with full auditability, deployment pipelines, monitoring, and optimized AI/data workflows using caching and vector databases.

MobiLytx Rewards & MobiLytx Digital Marketing Product
December 2021 – March 2025

Technical Lead

MobiLytx Rewards is a next-generation engagement marketing solution designed to power loyalty programs and promotional campaigns across industries.

Highlights

- Led the modernization of MobiLytx Rewards into a cloud-agnostic, multi-tenant SaaS product with AI/ML-driven personalization, serving enterprise clients across telecom and retail.
- Drove full-stack architecture and feature development using TypeScript, React, FeathersJS, Delta Lake, Postgres, and vector databases across a distributed microservices system.

Go

- ◀ Owned event-driven campaign execution pipeline using Kafka, handling high-throughput reward and loyalty workflows at scale with asynchronous processing and caching.
- ◀ Introduced observability and monitoring standards across the platform — improving deployment reliability and reducing mean time to resolution for production incidents.
- ◀ Delivered major improvements in user engagement and campaign performance through data-driven personalization and ML-driven segmentation.

Comviva
MobiLytx Digital Marketing Product
June 2020 – November 2021

Bengaluru, India

Senior Engineer
Contributed to the development of an omni-channel marketing automation platform designed to help enterprises engage customers across digital touchpoints.

- Highlights**
- ◀ Delivered 14+ integrations including Shopify Public App, Seatgeek, HubSpot, AWS QuickSight, GoodData, Matomo, WooCommerce, WordPress, Batch Push, and Unlayer Editor.
 - ◀ Implemented ML-driven insights using Google BigQuery and GoodData for personalized campaign optimization.
 - ◀ Enhanced performance through query optimization, caching, and CDN strategies.
 - ◀ Resolved deep integration challenges around multi-tenant data isolation, API rate limiting, and secure credential handling across third-party platforms.

Tata Consultancy Services (TCS)
Worked in the Lifesciences domain, delivering digital transformation solutions for global clients.
September 2018 – May 2020

Gandhinagar, India

Assistant System Engineer
Delivered digital transformation solutions for global life sciences clients, building full-stack applications and data-driven tools in a regulated enterprise environment.

- Highlights**
- ◀ Developed and delivered full-stack applications using ReactJS, Angular, NodeJS, and ExpressJS.
 - ◀ Enabled business collaboration using Microsoft 365 suite including SharePoint, Teams, Power Automate, and Power BI.
 - ◀ Built analytics and reporting workflows using GA360, Google Tag Manager, and Data Studio for enterprise life sciences teams.

 PROJECTS

- ◀ **InboxCraft:** Client-side tool that generates PowerShell scripts to automate Microsoft 365 Outlook inbox rules - no sign-up, no backend, fully transparent script execution.
- ◀ **InboxCraft Skills:** Official agent skill pack for InboxCraft - nine PowerShell-based tools enabling AI assistants to manage Outlook rules, folders, and categories via natural language.
- ◀ **StaleGuard:** Zero-friction stale deployment detector - silently reloads outdated SPA builds on tab focus by monitoring HTTP ETag/Last-Modified headers, with no polling or user banners.
- ◀ **PySecRecipes:** Production-ready GitHub Actions workflow for automated Python dependency security audits - weekly scans, vulnerability reporting, and intelligent issue lifecycle management.
- ◀ **PyImportSync:** AST-based Python dependency validator that ensures all imports in a codebase are declared in requirements.txt - available as a GitHub Action and pre-commit hook with a published v1.0.0 release.
