## 👤 ABOUT

I build AI platforms, multi-tenant SaaS, and the integrations companies actually run them on. At Phamax I lead engineering for Ariya, a pharma AI platform for content, research, analytics, and engagement. That includes the compliance path and the Veeva CRM and Salesforce Marketing Cloud connections. I also ship small tools in the open. The current one is openpreflight: GitHub Check Runs on a server you already run.

## 🏢 WORK EXPERIENCE

### Phamax

Bengaluru, India

Ariya is an AI platform for pharma: content generation, research, analytics, and engagement.

May 2025 – Present

#### Principal Engineer (Ariya Platform)

- Architect the core systems for an AI platform used by global pharmaceutical clients. Workflows cover content creation, research, analytics, and engagement.
- Built the AI Content Wizard and the content lifecycle around it: authoring, multi-stage approval, compliance checks, and distribution in regulated markets.
- Designed and shipped LLM orchestration (prompts, context injection, RAG, embeddings, tool calling) so generated content stays compliant and traceable across content types and markets.
- Integrated Veeva CRM and Salesforce Marketing Cloud (SFMC) so omnichannel campaigns can run across client tenants without breaking compliance.
- Led the Data Catalog so business and engineering teams can find data from metadata, with observability and self-serve access.
- Shipped audit trails, deployment pipelines, and monitoring, and sped up AI and data workflows with caching and vector databases.

### Comviva

Bengaluru, India

MobiLytx Rewards and MobiLytx Digital Marketing Product

December 2021 – March 2025

#### Technical Lead

- Led the rewrite of MobiLytx Rewards into a cloud-agnostic, multi-tenant SaaS product, with AI/ML personalization, for telecom and retail clients.
- Owned full-stack architecture and features in TypeScript, React, FeathersJS, Delta Lake, Postgres, and vector databases, on a distributed microservices system.
- Owned the Kafka campaign pipeline for high-throughput reward and loyalty workflows, with async processing and caching.
- Introduced observability and monitoring across the platform. Deploys got more reliable and production incidents took less time to resolve.
- Improved user engagement and campaign performance with personalization and ML segmentation.

### Comviva

Bengaluru, India

MobiLytx Digital Marketing Product

June 2020 – November 2021

#### Senior Engineer

- Shipped 14+ integrations including Shopify Public App, Seatgeek, HubSpot, AWS QuickSight, GoodData, Matomo, WooCommerce, WordPress, Batch Push, and

## 🎓 EDUCATION

2014  
2018

**Birla Vishvakarma  
Mahavidyalaya Engineering  
College, Vallabh Vidyanagar**

🎓 Bachelor of Engineering

Computer Engineering

## 🛠 SKILLS

### Core Areas

AI Platforms

Enterprise Integrations

Multi-Tenant SaaS

LLM Systems

Distributed Systems

Event-Driven Architecture

Developer Tooling

Regulated Environments

### AI & LLM Engineering

LLM Orchestration

RAG Pipelines

Prompt Engineering

Tool Calling

AI Evaluations

OpenAI API

Claude

LangGraph

Vector Databases

MCP

Agent Skills

### Platform Engineering

CI/CD

GitHub Actions

Docker

Observability

Infrastructure as Code

Security Automation

### Programming Languages

TypeScript

JavaScript

Python

Go

SQL

### Frameworks & Tools

React

Node.js

FeathersJS

Kafka

GraphQL & REST

Vercel AI SDK

Shopify

Turborepo

shadcn/ui

### Databases

PostgreSQL

SQLite

MongoDB

BigQuery

Redis

Cassandra

Delta Lake

Unlayer Editor.

- ◀ Built ML insights on Google BigQuery and GoodData for campaign optimization.
- ◀ Improved performance with query work, caching, and CDNs.
- ◀ Worked through multi-tenant data isolation, API rate limits, and how credentials are stored for third-party platforms.

Design

Figma

Affinity Designer

Procreate

Tata Consultancy Services (TCS)

Gandhinagar, India

Life sciences work for global clients.  
September 2018 – May 2020

Assistant System Engineer

- ◀ Built full-stack applications with ReactJS, Angular, NodeJS, and ExpressJS.
- ◀ Set up Microsoft 365 workflows with SharePoint, Teams, Power Automate, and Power BI.
- ◀ Built analytics and reporting with GA360, Google Tag Manager, and Data Studio for life sciences teams.

🔗 PROJECTS

openpreflightopenpreflight.xyz

Self-hosted GitHub Check Runs for private pull requests. One Go binary, one SQLite file, on a server you run. Apache-2.0.

Go

SQLite

Docker

GitHub Apps

Knockknock.codes

Copy-paste React and Tailwind components for private previews: access screens, invitations, and draft controls. Drops into a shadcn project.

React

Tailwind

shadcn/ui

InboxCraftinboxcraft.app

A browser-only PowerShell generator for Microsoft 365 Outlook inbox rules. Quick and Advanced modes, with templates for GitHub, Slack, and Jira. Scripts stay in the browser.

TypeScript

React

PowerShell

InboxCraft Skillsgithub.com/trivedi-vatsal/inboxcraft-skills

Official Agent Skills pack for InboxCraft. Nine PowerShell tools so assistants can manage Outlook rules, folders, and categories from a prompt.

PowerShell

Agent Skills

Outlook

audit-plan-tasksgithub.com/trivedi-vatsal/audit-plan-tasks

Agent Skill that scaffolds AUDIT.md, PLAN.md, and TASKS.md so a plan is based on what you actually checked, not on the request.

Agent Skills

Planning

StaleGuardvatsal.xyz/StaleGuard

Reloads a stale SPA when the tab is focused again, by checking ETag and Last-Modified. No polling and no banner.

TypeScript

React

PySecRecipesvatsal.xyz/pysec-recipes

GitHub Actions recipes that audit Python dependencies against PyPI, OSV, and Python Packaging advisories, and open or close issues as findings change.

Python

GitHub Actions

DevSecOps

PyImportSyncgithub.com/trivedi-vatsal/PyImportSync

AST check that every Python import is declared in requirements.txt. Ships as a GitHub Action and a pre-commit hook.
